Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claim 22 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 8-10 of U.S. Patent No. 6,728,239 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because:

Referring to claim 22, Claim 8 of U.S. Patent No.: 6,728,239 B1 teaches a method of providing a calling service on a broadband PBX. Claim 10 teaches, determining if the incoming call has a POTS address and converting the POTS address to an Internet address. Claim 8 teaches determining if the request is to access a broadband PBX if so implementing the broadband PBX Calling feature. claim 8 teaches determining if the request to access has PBX calling feature if so routing to the broadband gateway. Claim 9 teaches determining if the caller has authorization. Claim 9 teaches rejecting if the caller does not have authorization. Claim 10 teaches allowing rejected caller to enter another number.

U.S. Patent No.: 6,728,239 B1 does not expressly call for: residential PBX but teaches a broadband PBX.

It would have been obvious to one of ordinary skill in the art at the time of the invention that the broadband PBX performs the same functions as the residential PBX.
